No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                         April 3, 2006, 15:46:49; Search time 68.844 Seconds (without alignments) 97.107 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 30, Sequence 31, 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 67,

GENERAL INFORMATION:

APPLICANT: Fernandez-Salas, Ester

APPLICANT: Steward, Lance E.

APPLICANT: Acki, Kei Roger

ITLE OF INVENTION: Cell-Based Fluorescence Resonance Energy

TITLE OF INVENTION: Transfer (FRET) Assays For Clostridial Toxins

FILE REFERENCE: P-AR 4804

CURRENT FILING DATE: 2002-09-27

NUMBER OF SEQ ID NOS: 109

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 67
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

Sequence 30, Application US/09942024

Publication No. US20030143650A1

GENERAL INFORMATION:

APPLICANT: Steward, Lance E.

APPLICANT: Fernandez-Salas, Ester

APPLICANT: Formandez-Salas, Ester

TITLE OF INVENTION: Fret Protease Assays For Botulinum

TITLE OF INVENTION: Serctype A/E Toxins

FILE REFERRNCE: P-AR 4803

CURRENT APPLICATION WIMBER: US/09/942,024

CURRENT FILING DATE: 2001-08-28

NUMBER OF SEQ ID NOS: 96

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 30

LENGTH: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        APPLICANT: Steward, Lance E.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    OTHER INFORMATION: synthetic peptide chosen such that it is cleaved by BONT E
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 18, Application US/08393985

Patent No. 5693476

GENERAL INFORMATION:
APPLICANT: Scheller, Richard H.
TITLE OF INVENTION: Methods and Compositions for Modulation
TITLE OF INVENTION: of Vesicular Release
NUMBER OF SEQUENCES: 35
CORRESPONDENCE ADDRESS:
ADDRESSEB: Dehlinger & Associates
STREET: 350 Cambridge Avenue, Suite 250
CITY: Palo Alto
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 10671, Application US/09949016

| Sequence 10671, Application US/09949016
| Patent No. 6812339
| GENERAL INFORMATION:
| TITLE OF UNCENTER, J. Craig et al.
| TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
| TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
| TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
| TITLE OF INVENTION: WIMBER: US/09/949,016
| CURRENT FILING DATE: 2000-04-14
| PRIOR FILING DATE: 2000-10-20
| PRIOR FILING DATE: 2000-10-32
| PRIOR FILING DATE: 2000-10-03
| PRIOR FILING DATE: 2000-0-09-08
| NUMBER OF SEQ ID NOS: 207012
| SEQ ID NO 10671
| LENGTH: 219

C. -!- FUNCTION: t-SNARE involved in the molecular regulation of neurotransmitter release. May play an important role in the neurotransmitter release. May play an important role in the synaptic function of specific neuronal systems. Associates with complex in involved in vesicle docking and membrane fusion (By similarity).

C. -!- SUBUNIT: Part of the SNARE core complex containing SNAP2; VAMP2

and SYXIA. This complex binds CPLXI. Interacts with TRIM9, RIMS1
and NAMP2 (By similarity).

Comment=Isoforms differ by the usage of two alternative
homologous exons (5a and 5b) which encode for positions 56 to 94
and differ only in 9 positions out of 39;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SNP25 CHICK STANDARD; PRT; 206 AA.

  Sequence-VSP_010018;
--- PTM: Palmitoylated (By similarity).
--- SIMILARITY: Belongs to the SNAP-25 family.
--- SIMILARITY: Contains 2 t-SNARE coiled-coil homology domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       t-SNARE coiled-coil homology 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             100.0%; Score 79; DB 1; Length 206; ilarity 100.0%; Pred. -!- FUNCTION: t-SNARE involved in the molecular regulation of neurotransmitter release. May play an important role in the neurotransmitter release. May play an important role in the synaptic function of specific neuronal systems. Associates with proteins involved in vesicle docking and membrane fusion.
-!- SUBUNIT: Part of the SNARE core complex containing SNAP25, VAMP2 and STX1A. This complex binds CPLXI. Interacts with TRIM9, RIMSI, SNAP25BP and HGS. Binds STXBEC. Found in a ternary complex with STXIA and VAMP8 (By similarity). QBIUDE:HIPP4; NDExp=1; IntAct=EBI-524785, EBI-524753; ALTERNATIVE PRODUCTS:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Event=Alternative splicing; Named isoforms=2; Comment=Isoforms differ by the usage of two alternative homologous exons (5a and 5b) which encode for positions 56 to 94 and differ only in 9 positions out of 39;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE-22347237; PubMed=12459461; DOI=10.1016/S0014-5793(02)03629-3; Hepp R., Cabaniols J.P., Roche P.A.; "Differential phosphorylation of SNAP-25 in vivo by protein kinase C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      neurotransmitter release. May play an important role in the synaptic function of specific neuronal systems. Associates with proteins involved in vesicle docking and membrane fusion. SUBUNIT: Part of the SNARE core complex containing SNAP25, VAMP2 SNAP25BP and HGS. Binds CPLX1. Interacts with TRIM9, RIMS1, SNAP25BP and HGS. Binds STXBP6. Found in a ternary complex with ALTERNATIVE PRODUCTS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FEBS Lett. 532:52-56(2002).

```

```
-i- PTM: Palmitoylated (By similarity).
-i- SIMILARITY: Belongs to the SNAP-25 family.
-i- SIMILARITY: Contains 2 t-SNARE coiled-coil homology domains.

WPI; 1999-579939/49.

The invention relates to an enzymatic assay for the quantitation of type A botulinum toxin, by determining the proteolytic activity of botulinum neurotoxin type A using fluorescamine detection. Botulinum toxin A has been shown to cleave the synaptosomal neurotransmitter peptide SNAP25 been shown to cleave the synaptosomal neurotransmitter peptide SNAP25 between residues 197-198. The method comprises adding an analogue (e.g. AAY44022-Y44076) of the SNAP25 peptide (AAY44021, minno acids 187-203 of hugarolysis of the peptide is initiated, then stopping hydrolysis of the peptide is unitiated, then stopping hydrolysis of the peptide is unitiated, then stopping hydrolysis of the peptide is contained with a label capable of detecting free amino groups resulting from the hydrolysis. The amount of botulinum toxin amount of label produced from a known concentration of toxin measured

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to novel clostridium toxin substrates. The invention further relates to botulinum serotype A/E (BoNT/A/E) substrates which comprise a donor fluorophore, an acceptor having an absorbance spectrum overlapping the emission spectrum of the donor fluorophore and a C BONT A or BONT/E recognition sequence comprising a cleavage site, where the cleavage site intervenes between the donor fluorophore and acceptor and under the appropriate conditions. Natural targets of clostridium certain intervenes between the donor fluorophore and acceptor and under the appropriate conditions. Natural targets of clostridium neurotoxins include VAMP (synaptobrevin), SNAP-25 and syntaxin. Sequences of the invention are useful in assaying for the protease activity of any clostridial toxin including botulinum toxins of all serotypes and tetanus toxins (TeNT) in a sample including bacterial, baculoviral and yeast lysate, raw, cooked or processed foods, beverages, animal feed, soil samples. They are useful to assay a sample from a human or animal, for e.g., exposed to clostridial toxin or having one or more symptoms of a clostridial toxin, to follow activity during production and purification of clostridial toxin, to follow activity during production and purification of clostridial toxin and cosmetics. The present sequence is human solved to supple the invention
                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Botulinum serotype A/B substrate useful for assaying protease activity of botulinum toxins, comprises donor fluorophore, acceptor and a clostridial toxin recognition sequence that includes a cleavage site.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Determining clostridial toxin protease activity, by treating sample with clostridial substrate with donor fluorophore, acceptor, toxin recognition sequence, under conditions which exhibit resonance energy transfer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides clostridial toxin substrates useful in assaying for the protease activity of any clostridial toxin including toxins of all serotypes as well as tetanus toxins. The present sequence is human SNAP-25 BONT/A (botulinum neurotoxin serotype A) recognition
                                                                                                                                                                                                                                                                                                                                                                                          Clostridial toxin; protease activity; tetanus toxin; botulinum toxin;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gape

The invention relates to a method of determining (MI) clostridial toxin activity, comprising contacting cell with sample comprising clostridial toxin substrate with donor fluorophore (R), acceptor (A) with an absorbance spectrum overlapping emission spectrum of fluorophore colostridial toxin recognition sequence with cleavage site intervening between (P) and (A), where under appropriate conditions resonance clostridial toxin recognition sequence with cleavage site intervening clostrophore, and determining resonance energy transfer of the contacted cell relative to a control cell, where a difference in contacted cell relative to a control cell, where a difference in cresonance energy transfer of the contacted cell as compared to the contacted cell is indicative of clostridial toxin activity. (MI) is useful control cell is indicative of clostridial toxin activity. (MI) is useful contacted clostridial toxin activity, where the sample is a crude cell is about a contact of clostridial toxin activity, where the sample is a crude control cell is indicative a binding a cellular uptake of the toxin, cranslocation into the cell cytosol and protease activity. In the method control cell cytosol and protease activity. In the method control cell cytosol and protease activity. BonT/G selected from a BonT/A, BoNT/B, BONT/E, BONT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Determining clostridial toxin activity, comprises contacting cell with sample comprising substrate with donor fluorophore, acceptor and recognition sequence, exciting fluorophore, and determining resonance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human SNAP-25 substrate BoNT/A recognition sequence, SEQ ID NO:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of determining (MI) clostridial toxin activity, comprising contacting cell with sample comprising clostridial coxin substrate with donor fluorophore (F), acceptor (A) with an absorbance spectrum overlapping emission spectrum of fluorophore concertidial toxin recognition sequence with cleavage site intervening between (F) and (A), where under appropriate conditions resonance clostrions and determining resonance energy transfer of the contacted cell relative to a control cell, where a difference in contacted cell relative to a control cell, where a difference in cresonance energy transfer of the contacted cell is indicative of clostridial toxin activity. (MI) is useful control cell is indicative of clostridial toxin activity. Where the sample is a crude cell relative clostridial toxin activity, where the sample is a crude cell relations such as binding a cellular upgate of the toxin crudices the need for animal toxicity studies and serves to analyze reduces the need for animal toxicity studies and serves to analyze control into the cell cyclosol and protease activity. In the method MI, the clostridial toxin substrate is a botulinum toxin substrate comprising a BoNT/A, BONT/E, BON
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Determining clostridial toxin activity, comprises contacting cell with sample comprising substrate with donor fluorophore, acceptor and recognition sequence, exciting fluorophore, and determining resonance

sample with and second

```
The present invention relates to a method for determining protease activity of clostridial neurotoxins such as botulinum neurotoxin (BoNT) and tetanus neurotoxin (TaNT). The method involves treating with a sample, in solution phase under conditions sultable for clostridial toxin protease activity, a tagged toxin substrate (e.g. SNAP-25, VAMP, syntaxin) comprising fluorescent protein, first partner of affinity couple and clostridial toxin recognition sequence comprising cleavage site; contacting treated sample with second partner of affinity couple; and assaying presence of fluorescent cleavage product in the treated sample. The present sequence is the human SNAP-25 substrate BoNT/A (botulinum neurotoxin serotype A) recognition sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Enzymatic assay, quantitation, type A botulinum neurotoxin, proteolysis;

                                                                    The invention relates to an enzymatic assay for the quantitation of type A botulinum toxin, by determining the proteolyric activity of botulinum neurotoxin, by determining the proteolyric activity of botulinum hear span and fluorescamine detection. Botulinum toxin A has been shown to cleave the synaptosomal neurotransmitter peptide SNRP25 between residues 197-198. The method comprises adding an analogue (e.g. AAY44022-144076) of the SNRP25 peptide (comprises adding an analogue (e.g. human SNRP25) to a sample containing the botulinum toxin A so that hydrolysis of the peptide at different time points; and measuring the amount of hydrolysis at each time point by combining with a label capable of detecting free amino groups resulting from the hydrolysis. The amount of botulinum toxin A present in the sample is determined by comparing measurements with the amount of label produced from a known concentration of toxin measured under similar conditions. The method is useful for the quantitation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an enzymatic assay for the quantitation of type A botulinum toxin, by determining the proteolytic activity of botulinum neurotoxin type A using fluorescamine detection. The method comprises adding an analogue (e.g. AAY44022-Y44076) of this peptide (which represents amino acids 187-203 of the human synaptosomal protein SNAP25) to a sample contening the botulinum toxin A so that hydrolysis of the peptide is initiated, then stopping hydrolysis of the different time points; and measuring the amount of hydrolysis at each
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Enzymatic assay, quantitation, type A botulinum neurotoxin, proteolysis;

neurotoxin light chain (BoWT LC) serotype A, where the DNA has a sequence that is expressible in a host organism other than Clostridium, or has a total A+T content that is less than about 70% The BOWT LC protein is useful in vaccination against botulism, for eliciting protective immunity in a mammal, for treating dystonias, spasticity, pain, ocular motility, facial dyskinesias, stiff-person syndrome, bladder dysfunction, segmental myoclonus, hyperkinetic disorders, cosmetic treatment of facial wrinkles, control autonomic nerve function or tiptoe-walking due to stiff muscles common in children with cerebral palsy. The sequences are also useful for screening for botulinum neurotoxin inhibitors. This sequence represents a human polypeptide C-terminal fragment, used in the scope of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Botulinum neurotoxin light chain; BoNT LC; botulism; dystonia; pain; spasticity; ocular motility; facial dyskinesia; stiff-person syndrome; bladder dysfunction; segmental myoclonus; hyperkinetic disorder; human; commetic treatment; facial wrinkle; cerebral palsy; analgesic; relaxant; lower motor neuron hyperactivity; autonomic nerve function; muscular;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel nucleic acid molecule encoding botulinum neurotoxin light chain serotype A, useful for producing the neurotoxin for vaccination against botulism, comprises sequence expressible in host other than Clostridium
time point by combining with a label capable of detecting free amino groups resulting from the hydrolysis. The amount of botulinum toxin A present in the sample is determined by comparing measurements with the amount of label produced from a known concentration of toxin measured under similar conditions. The method is useful for the quantitation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               invention relates to a nucleic acid molecule encoding a botulinum
                                                                                                                                                                                                                                                                                                                               Length 17;

The present invention relates to novel clostridium toxin substrates. The invention further relates to botulinum serotype A/E (BoNT/A/E) substrates which comprise a donor fluorophore, an acceptor having an absorbance appetrum overlapping the emission spectrum of the donor fluorophore and abor A or BoNT/E recognition sequence comprising a cleavage site, where the cleavage site intervenes between the donor fluorophore and acceptor and under the appropriate conditions, the resonance energy transfer is exhibited between the donor and acceptor. Natural targets of clostridium neurotoxins include VAMP (synaptobrevin), SNAP-25 and syntaxin. Sequences of the invention are useful in assaying for the protease activity of any clostridial toxin including botulinum toxins of all serotypes and tetanus toxins (TeNT) in a sample including bacterial, baculoviral and yeast lyamate, raw, cooked or processed foods, beverages, animal feed, animal amminer.
                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Botulinum serotype A/E substrate useful for assaying protease activity of botulinum toxins, comprises donor fluorophore, acceptor and a clostridial toxin recognition sequence that includes a cleavage site.

They are useful to assay a sample from a human or animal, for e.g., exposed to clostridial toxin or having one or more symptoms of a clostridial toxin, to follow activity during production and purification of clostridial toxin and to assay formulated clostridial toxin and to assay formulated clostridial toxin products including pharmaceuticals and cosmetics. The present sequence is human SNAP-25 peptide used in the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to novel clostridium toxin substrates. The invention further relates to botulinum serotype A/E (BoNT/A/E) substrates which comprise a donor fluorophore, an acceptor having an absorbance spectrum overlapping the emission spectrum of the donor fluorophore and a CBOMT/E recognition sequence comprising a cleavage site, where the cleavage site intervenes between the donor fluorophore and acceptor and under the appropriate conditions, the resonance energy transfer is exhibited between the donor and acceptor. Natural targets of clostridium neurotoxins include VAMP (synaptobrevin), SNAP-25 and syntaxin. Sequences of the invention are useful in assaying for the protease activity of any clostridial toxin including botulinum toxins of all serotypes and tetanus toxins (TeNT) in a sample including bacterial, baculoviral and yeast lysate, raw, cooked or processed foods, beverages, animal feed, soil samples. They are useful to assay a sample from a human or animal, for e.g., exposed to clostridial toxin or having one or more symptoms of a clostridial toxin, to follow activity during production and purification of clostridial toxin and to assay formulated clostridial toxin products including pharmaceuticals and cosmetics. The present sequence is human SNAP-25 peptide used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Botulinum serotype A/B substrate useful for assaying protease activity of botulinum toxins, comprises donor fluorophore, acceptor and a clostridial toxin recognition sequence that includes a cleavage site.

clostridial substrate with donor fluorophore, acceptor, toxin recognition sequence, under conditions which exhibit resonance energy transfer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Determining clostridial toxin protease activity, by treating sample with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides clostridial toxin substrates useful in assaying for the protease activity of any clostridial toxin including toxins of all serotypes as well as tetanus toxins. The present sequence is human SNAP-25 BONT/A (botulinum neurotoxin serotype A) recognition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Clostridial toxin; protease activity; tetanus toxin; botulinum toxin;

Determining clostridial toxin protease activity, by treating sample with clostridial substrate with donor fluorophore, acceptor, toxin recognition sequence, under conditions which exhibit resonance energy transfer.
                                                                                                                                                                                                                                                       The present invention provides clostridial toxin substrates useful in assaying for the protease activity of any clostridial toxin including toxins of all serotypes as well as tetanns toxins. The present sequence is human SNAP-25 BONT/A (botulinum neurotoxin serotype A) recognition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Determining clostridial toxin activity, comprises contacting cell with sample comprising substrate with donor fluorophore, acceptor and recognition sequence, exciting fluorophore, and determining resonance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              toxin; fluorophore; clostridial toxin product; BOTOX; food.
                                                                                                                                                                                                                                                                                                                                                                                        ö

contridial toxin recognition sequence with cleavage site intervening between (F) and (A), where under appropriate conditions resonance transfer is exhibited between fluorophore and acceptor, exciting the donor fluorophore, and determining resonance energy transfer of the contacted cell relative to a control cell, where a difference in control cell is indicative of the contacted cell as compared to the contacted cell as compared to the control cell is indicative of clostridial toxin activity. (MI) is useful for determining clostridial toxin formulated clostridial toxin cell lysate, isolated clostridial toxin, formulated clostridial toxin cell lysate, both of control is an automorated high-throughput assay. (MI) reduces the need for animal toxicity studies and serves to analyze multiple toxin functions such as binding a cellular uptake of the toxin, the clostridial toxin substrate is a botulinum toxin substrate selected from a BonT/A, BoNT/B, BONT/C, BONT/E, BONT/E, BONT/F, BONT/F, BONT/E, BONT/E, BONT/F, BONT/F, BONT/E, BONT/E, BONT/C, BONT/E, BONT/F, BONT/F, BONT/F, BONT/F, BONT/E, Cot In substrate comprising a botulinum toxin sequence corresponds to a recognition sequence for a botulinum toxin used as the clostridial \$

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 30,

US-10-917-644-30

Sequence 30, Application US/10917844

Publication No. US20050100973A1

GENERAL INFORMATION:
APPLICANT: Steward, Lance E.
APPLICANT: Gilmore, Marcella A.
TITLE OF INVENTION: GFP-SANP25 Fluorescence Release Assay
TITLE OF INVENTION: For Botulinum Neurotoxin Protease Activity
TITLE OF INVENTION: WHERE: US/10/917,844

CURRENT FILING DATE: 2004-08-13

PRIOR FILING DATE: 2001-08-28

NUMBER OF SEQ ID NOS: 113

SOFTWARE: FastSEQ for Windows Version 4.0

LENGTH: 17

ORGANISM: Artificial Sequence
```

```
CURRENT APPLICATION NUMBER: US/09/942,098

CURRENT FILING DATE: 2001-08-28

NUMBER OF SEQ ID NOS: 96

SOFTWARE: PESESEG for Windows Version 4.0

SEQ ID NO 88

LENGTH: 23

TYPE: PRT

ORGANISM: Artificial Sequence
FEATURE:
OTHER INFORMATION: Synthetic peptide
NAME/KEY: MOD_RES

LOCATION: 1

OCCATION: 13

COCATION: 23

LOCATION: AMIDATION: Xaa=tetramethylrhodamine-modified lysine
NAME/KEY: AMIDATION: At the C-terminal
LOCATION: (0)

COCATION: (1)

OTHER INFORMATION: at the C-terminal

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
